For Grown-Ups: How to Use These Worksheets

For first to third grade. Each activity has two pages, the same problems in a new order.

Why use it

Regrouping is what happens when a column adds up to 10 or more: ten ones become one ten, written as a small 1 over the next column. Many parents learned it as carrying. Schools now say regrouping because it names what the 1 is, a ten, the place value idea behind it (Common Core 2.NBT.B.7).

What it is good for

- A warm-up with no regrouping, then regrouping the ones.
- Sums past 100, and adding three or four numbers.
- Three-digit numbers with one regroup, then two.

How to use it

1. Start on pages 1 and 2, which need no regrouping, to check the columns line up.
2. Add the ones first. If they make 10 or more, write the ten as a small 1 above the tens.
3. Ask what the 1 means: it is one ten, not one.
4. A 1 written on the line under the numbers is right too; schools teach both.
5. Check with the answer key. Each red number sits where your child writes it.

> **Try saying:** “The ones make 13. That is 1 ten and 3 ones. Where does the ten go?”

Tip: A common mistake is writing all of 13 under the ones. If you see a sum like 713 for 46 + 37, the ten was not regrouped.
