For Grown-Ups: How to Use These Worksheets

For first and second grade, once the doubles are easy. Each activity has two pages, the same facts in a new order.

Why use it

A near double is two numbers next to each other, such as 6 + 7. Instead of counting, your child starts from a known double: 6 + 6 = 12, so 6 + 7 is one more, 13. It turns a fact your child does not know yet into one they do.

What it is good for

- Doubles plus one, such as 8 + 9, with the double written first as a helper.
- Doubles plus two, such as 6 + 8, using the double in the middle: 7 + 7.
- Mixed pages: which kind of near double is it?

How to use it

1. Make sure the doubles are easy first.
2. Your child answers the double on the top line first, then the fact under it.
3. Ask how the fact differs from the double: one more, so the answer is one more.
4. On pages 5 and 6, the helper is the double in the middle: for 6 + 8, think 7 + 7.
5. Check with the answer key. Each red number sits where your child writes it.

> **Try saying:** “You know 7 + 7 is 14. And 7 + 8 has one more. So what is 7 + 8?”

Tip: The order does not matter: 7 + 6 uses the same double as 6 + 7, the smaller number twice.
