For Grown-Ups: How to Use These Worksheets

A few minutes at a time, for a child who counts to 10 and is ready to write the number.

Why use it

A ten frame is two rows of five boxes, one dot in each, filled along the top row first. Because a row holds five, your child can start to see 7 as a full row and 2 more instead of counting every dot. Writing the number for a count ties the numeral to the amount it stands for, which the kindergarten standards ask for.

What it is good for

- Pre-K and kindergarten: counting 1 to 10 dots, out of order.
- Writing the numeral for a count.
- Showing a number by drawing it, top row first.

How to use it

1. On the how many pages, your child counts the dots in each frame and writes the number in the box.
2. On the show the number pages, your child reads the number and draws that many dots, one in each box.
3. Fill the top row, left to right, before any dot goes in the bottom row.
4. Check the counting pages with the answer key. On the drawing pages, count your child's dots together.

> **Try saying:** “The top row is full, so that is five. Five and 2 more is how many?”

Tip: If forming the numbers is the hard part, practice them on the number tracing sheets first.
