Blank Hundreds Chart: Answer Key

For the grown-up. The 120 chart answers every page: the 1 to 100 pages are its first ten rows.

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100
101	102	103	104	105	106	107	108	109	110

For Grown-Ups: How to Use These Worksheets

One chart at a time, with a pencil, once your child can write numbers to 20.

Why use it

Filling in a blank chart practices writing two-digit numbers and checks whether your child knows the order. The patterns help: each row starts where the last one stopped, every number in a column ends in the same digit, and the last column is the tens.

What it is good for

- Kindergarten and first grade: writing the numbers to 100, then to 120.
- The supported charts on pages 2 and 4, where every row starts for you.
- Writing past 100: 101, 102, 103.

How to use it

1. Start with page 2, where the first column is printed, so each row begins with its tens written.
2. Your child writes along each row, left to right, one more each time.
3. At the end of a row, sweep back to the left edge, the same move as reading a line of text.
4. Move to page 1, with only the 1 printed, then to the 120 charts on pages 3 and 4.
5. Check with the filled 120 chart on page 5. Its first ten rows answer the 1 to 100 pages.

> **Try saying:** “What did the last row end on? So what does this row start with?”

Tip: A blank chart is 99 numbers to write. Cover all but one row with paper if the writing gets slow.
