For Grown-Ups: How to Use These Worksheets

One page at a time, once your child can name a place in the line.

Why use it

Finding the animal in a given place is the harder half of ordinal numbers, so it comes after naming a place. Your child hears an ordinal word, such as third, counts from the front to find it, and marks one animal. That shows that third names a single place, not a group of three.

What it is good for

- Every place from first to tenth, and last.
- Following a direction with an ordinal word in it.
- Pre-K and kindergarten.

How to use it

1. Read one prompt aloud, such as Circle the third animal.
2. Your child starts at the flag and counts along the line to find that animal.
3. Your child marks only that one: a circle, a line under it, an X, or color.
4. Do the four prompts on a page one at a time, checking each before the next.
5. Check with the answer key on page 4, which shows each page's four marks in red.

> **Try saying:** “Put your finger on the flag. Now count to the seventh animal. Put an X on just that one.”

Tip: The tenth animal and the last animal are the same one. Ask your child why.
